

DHANUSH M

SOFTWARE DEVELOPER

Gmail — LinkedIn — Github — +91 8606393247

A fourth year B.Tech in Information Technology student, who has hands-on experience in AI/ML, data structures and algorithms, and is eager to explore the world of finance, management and consulting.

PROFESSIONAL EXPERIENCE

ML Intern, PACELAB, Kochi

May 2025 – June 2025

Successfully completed a 2-week internship at PACELAB Kochi in Machine Learning.

- Developed various machine learning models using classification and regression algorithms.
- Worked extensively on data preprocessing and cleaning techniques.

AI Intern, Soften technologies

June 2026

- Learned and implemented Retrieval-Augmented Generation (RAG) concepts.
- Built a RAG-based chatbot for AI/ML research paper analysis.
- Developed document ingestion, embedding, retrieval, and response generation pipelines.
- Worked with Python, LangChain, Gemini API, ChromaDB, and Flask.

EDUCATION

BTech in Information Technology

Aug 2023 – May 2027

School of Engineering, Cochin University of Science and Technology, Kochi, Kerala

- Major in Information Technology
- Currently in 3rd Year
- CGPA: 7.8

Class 12(HSE)

2021-2022

St. Mary's Higher Secondary School, Bharananganam, Kerala

- Percentage: 95

Class 10(SSLC)

2019-2020

Little Flower High School, Chemmamattom

- Percentage: 93

PROJECTS

Heart Disease Prediction Model

 GitHub

- Built an end-to-end heart disease prediction model by cleaning and preprocessing data from scratch.
- Compared multiple algorithms and selected Logistic Regression.
- Achieved Recall Score of 0.89.
- Developed a Streamlit UI for user interaction and visualization.

Machine Learning-Based Phishing Website Detection

 GitHub

- Developed a phishing website detection system using React (frontend) and Flask (backend).
- Built an XGBoost model to detect phishing websites from a website URL.
- Enabled users to check a website by simply entering its URL.
- Achieved a 0.97 recall score for phishing website detection.
- Tech Stack: Python, React, Flask, XGBoost, Scikit-learn, Pandas, NumPy.

RAG-Based GitHub Repository Analysis Chatbot

- Developed a RAG-based chatbot to analyze GitHub repositories.
- Built a pipeline to process locally cloned repository files and retrieve relevant code using semantic search.
- Enabled users to ask questions about the repository and receive context-aware answers.
- Tech Stack: Python, React, Flask, LangChain, Gemini API, ChromaDB

TECHNICAL SKILLS

- **Programming Languages:** C, C++, Python
- **Databases:** SQL
- **AI/ML:** NumPy, Pandas, Matplotlib, Scikit-learn, Streamlit
- **Relevant Coursework:** Data Structures and Algorithms, DBMS, OOP, Computer Networks
- **Developer Tools:** VS Code, Docker, GitHub, Google Colab

SOFT SKILLS

- Communication
- Networking
- Adaptability
- Strong Analytical Mindset
